ReadyWrap™
Clinically effective[1] and easy-to-use[2,3] adjustable compression wrap

ReadyWrap™
Adjustable compression garments for patients with venous and lymphatic diseases.

ReadyWrap™
Clinically-effective[1] and easy-to-use[2,3] adjustable compression wrap

ReadyWrap is an adjustable variable compression wrap that provides patients and their caregivers an easy-to-use solution to support wound healing and oedema management.[1] This wrap provides clinically-effective compression therapy while supporting patient compliance with its unique alternating strapping system. With ReadyWrap, you can be certain your patients will have an effective and comfortable garment that easily adjusts to their limb and donning abilities.

Why choose ReadyWrap

ReadyWrap is better for patients
Easy to use[2], with colour-coded VELCRO® brand fasteners

- front-fastening short straps aid patient application and readjustment[2,3]
- overlapping straps minimise user application error and can prevent undue loss of pressure if the patient does not apply the product perfectly[1]
- low-profile design, allowing patients to wear their usual footwear[4]
- all products are available in black or beige

ReadyWrap is clinically effective
Short stretch properties[5] – Therapeutic working and tolerable lower resting pressure

- positive outcomes for leg ulcers[2,3,6] and lymphoedema[3] patients
- effective in the management of recurrent swelling (oedema) and ulceration[6]
- excellent SSI of between 16 and 23, similar to inelastic bandages[5]
- 50% overlapping straps prevent gapping and can accommodate changing limb circumference to contain and control oedema[3,6]

ReadyWrap is cost-effective
ReadyWrap can provide cost savings associated with[7–11]:

- time saved due to quicker and easier application of the device, in comparison to compression bandages
- reduced use of bandaging materials – ReadyWrap can be washed and reused over a period of six months
- can be easily applied by the patient or their carer
- can reduce the need for clinic visits due to self-care at home

A full holistic and vascular assessment should be carried out before treatment.

Indications
- Lymphoedema
- Chronic oedema
- Venous disease

Precautions
ABPI <0.8 – compression therapy should only be used under strict medical or vascular specialist supervision. Not suitable for ankle circumference of less than 18 cm unless padding is used to increase the ankle circumference to 18 cm or more. This system may be unsuitable where there is heavy exudate and for large wounds.
